STEAM & ELECTRIC ECO CONTROL UNIT

Basing on our experience on steam and condensate recovery systems in the paper sector we are pleased to show S.E.C.U. and E.C.U. They are a temperature control unit specially designed to heat recirculating diathermic oil or water in the cylinders, by means of line steam or electric resistance. They are provided with power panel and an independent control PLC able to manage all operating phases.

S.E.C.U. and E.C.U. are provided with PLC and remote connection that give the possibility to manage all working phases. All skid are also provided with internal temperature control forced cooling system and diathermic oil fast safety cooling system.
